+ EXPERIENCES

October 2014 - Present
Developer at Nextopia

Integrate Nextopia site search and autocomplete for new Nextopia customers' online stores using TWIG templates, jQuery, CSS and various other front-end web technologies

Troubleshoot server side technical issues for legacy Nextopia customers on the PHP based search subdomain platform

Migrate the "millionshort" search engine from a PHP code base to Node JS using the Sails MVC framework

Develop a Shopify app for exporting product catalog data for Nextopia's search using Ruby on Rails

Wrote a PHP parser that connects Nextopia's search data to Yotpo's API to add customer reviews to Nextopia customer search pages

May 2012 – Sept. 2012
Student Intern at Canadian Research Institute for Social Policy (co-op work term)

Provide technical support for CRISP employees

Develop a web based inventory management system using the Code Igniter MVC framework

Sept. 2011 – Dec. 2011
Student Intern at Lashpoint (co-op work term)

Testing/Debugging web page designed for the New Brunswick health and revenue foundation (written in PHP)

Wrote server side Java code for Kinek mobile tracking service

Created user interface and wrote front-end CSS, Javascript, and HTML for Barret's .NET based internet provisioning protal

Started development for Radian 6 CSV report generating Java app

Jan. 2011 – May 2011
Student Intern at NB Power (co-op work term)

Develop a web app using Microsoft Silverlight and .NET technologies to connect with their on-site PI Power Systems

Used Excel to write macros for automating administrative changes to their PI database
